

Filter principle

The Cairry filter principle: the filters are easily replaceable and can only be fit in one way. So you always have a perfectly working air cleaner, quickly and easily.

EUROMATE OFFERS ALL-IN-ONE SOLUTIONS FOR AIR CLEANING

Euromate has over 40 years of experience in the field of air cleaning. This provides in-depth knowledge of indoor air and removal of air pollutants.

For optimal use of the air cleaner regular maintenance is recommended. The choice of filter type and frequency of filter replacement depends on the type

and extent of air pollution. Replacement filters can be ordered from our sales support department. You can also contact them with any questions you may have about this air cleaner.

Euromate enables people to breathe pure air. For the improvement of indoor air quality we offer high-quality, contemporary products that effectively remove a broad range of pollutants. Years of experience, expertise and service orientation allow us to provide effective air cleaning solutions to our (international) customers.

CAIRRY AIR CLEANER

Dust management
in a handy size

The perfect partner for your next building project

All over the world, people are becoming increasingly aware of the need for clean air. We are all exposed to air pollution and therefore everyone shares responsibility, not just for ourselves but also for others. For contractors and construction professionals air pollution concerns are much greater still. They work in areas where lots of harmful dust is present in the air every day. Concern for safe and healthy working conditions is continuously growing and becoming ever more important.

Conversion and renovation work cause dust nuisance. This dust is unhealthy and causes lasting health problems. Moreover, tools and materials become unnecessarily dirty. Euromate has the perfect solution for building without the nuisance of dust!

Cairry air cleaner

The Cairry is the perfect solution for dusty work in the entire building or house and therefore the perfect partner for every contractor. The Cairry must be placed in the room where the source of dust is located. The air cleaner passes the charged dust particle through the filters, harmful particles remain trapped in the filters and dust-free air is blown out.

For a painter, working in a dust-free environment is of great importance. People working in this and similar professions are also exposed to harmful gases and unpleasant odours. By opting for an active carbon filter module, these are removed from the air. This makes the Cairry particularly well suited for a painter or carpet fitter. Depending on the size of the room, more than one Cairry air cleaner may be needed. A Cairry can also be placed in rooms adjacent to those where the renovation work is taking place. This eliminates any last traces of dust in areas of the home or office still in use during the work.

Filter more than

90%

dust out of the air

Makes use of

3

consecutive filters

Renovation work without dust or fumes

The Cairry is perfectly suited for contractors, painters, tilers, demolishers, carpet fitters and self-employed people in similar professions. Thanks to three different filter modules, which are easy to replace, you always have optimum suction power.

Pre filter (G4)

The pre filter captures the coarser dust and particles. The pre filter is easy to clean with a vacuum cleaner.

Filter module 1 (F7)

Filter module 1 has a high capture efficiency for irritating fine dust. These particles are trapped in this filter.

Filter module 2 (HEPA13)

Filter module 2 is a very high-grade filter, which even captures the harmful ultra-fine dust, like quartz dust. More than 99% of all particles are filtered by this module.

Filter module 3 (ACF) optional

If in addition to dust you are also exposed to unpleasant odours or harmful fumes, you can simply replace filter module 2 (H13) with filter module 3 (ACF) containing active carbon. This 'odour filter' makes the Cairry also perfectly suited for use by painters, carpet fitters, etc.

“

Since the purchase of our Cairry the working conditions are much more pleasant. We often work in enclosed spaces. This unit works so well that we have practically no problem with construction dust anymore and the air is clean and agreeable to work in!

Design

Easy to take anywhere

You can easily take the Cairry with you thanks to its compact size and light weight. Thanks to the 'soft' housing it can take a bit of rough handling without damaging, so the Cairry will last through many building projects. The Cairry is also very quiet, so you can leave it on all through the night.

Features

- Effectively filters 700 m³/h
- Portable, light weight of just 11.5 kg
- Handy size 48 x 48 x 49 cm
- Low power consumption (170 W)
- HEPA filter
- Very durable
- Soft housing
